6WIND Secures First Round of Financing

16 November 2000 12:28
By **Tornado-Insider.com staff**

6WIND secured an undisclosed first round of financing, led by TechFund Capital and CDC Innovation Partners, to market its new Ipv6 (IP version 6) border equipment.

The Paris-based 6WIND, which helps network operators such as telecom companies and large corporation control IP flows, plans a January 2001 launch of its new IP Edge Device. Located at the boundary between the operator access network and the customer network, the IP Edge Device operates on the emerging Ipv6 standard, enabling the convergence of all IP-based services-- including integration between fixed and third generation mobile infrastructure.

6WIND was spun off in July of this year from French defense and commercial electronics maker Thomson-CSF.
